

Entity-relationship diagram

Every tenant-owned table also references `companies` through `company_id` . Those edges are left out of the first diagram so it stays readable; the second diagram shows them.

Domain relationships

Tenancy — what belongs to a company

Every table below references `companies.id` through the listed column (a table, not a diagram: drawn, the fan-out from `companies` is too wide to read).

Table	Column	Nullable	Row-Level Security
<code>company_usage_stats</code>	<code>company_id</code>	no	on
<code>users</code>	<code>company_id</code>	yes	on
<code>cases</code>	<code>company_id</code>	no	on
<code>documents</code>	<code>company_id</code>	no	on
<code>document_checks</code>	<code>company_id</code>	no	on
<code>document_page_hashes</code>	<code>company_id</code>	no	on
<code>cross_document_findings</code>	<code>company_id</code>	no	on
<code>issuer_registry</code>	<code>company_id</code>	no	on

Table	Column	Nullable	Row-Level Security
<code>risk_rules</code>	<code>company_id</code>	no	on
<code>risk_settings</code>	<code>company_id</code>	no	on
<code>case_risk_assessments</code>	<code>company_id</code>	no	on
<code>risk_scores</code>	<code>company_id</code>	no	on
<code>case_actions</code>	<code>company_id</code>	no	on
<code>case_reports</code>	<code>company_id</code>	no	on
<code>audit_log</code>	<code>company_id</code>	yes	on
<code>signature_references</code>	<code>company_id</code>	no	on
<code>signature_matches</code>	<code>company_id</code>	no	on
<code>bulk_upload_cases</code>	<code>company_id</code>	no	on
<code>bulk_uploads</code>	<code>company_id</code>	no	on

`users.company_id` and `audit_log.company_id` are nullable: NULL marks a platform admin and a platform-level event respectively. `risk_rule_templates` has no `company_id` — it is platform-level and only reachable by the platform database role.
