

FDDT Case Report

Fraud Document Detection Tool — system-assisted analysis for human review. See Section 6 for what this report is and is not.

1. Case Details

Case ID	CASE-9EAF4471 9eaf4471-5b3f-420d-81e3-f638d5ae85c9
Submitted by	testreviewer L!
Submission date	2026-10-07 06:44 UTC
Documents	1 Types: Quotation
Case type	School document
Status / decision	Submitted / Pending review
Report generated	2026-10-07 06:45 UTC by testreviewer L! (Reviewer L1)
Report ID	4da07184-18d1-4a54-b869-a5e27ebdec4a

Preliminary report. Automated analysis had not finished when this report was generated. Still outstanding: Field validation of 'caseimage2.pdf'; Issuer verification of 'caseimage2.pdf'; Metadata forensics of 'caseimage2.pdf'; Error level analysis of 'caseimage2.pdf'; Copy move detection of 'caseimage2.pdf'; Duplicate detection of 'caseimage2.pdf'.

2. Executive Summary

Not yet scored. The risk engine has not produced an assessment for this case, so there is no overall tier.

Why: No risk tier yet — automated analysis is still in progress.

Decision status: Pending review.

Exceptions: 13 item(s) did not pass, 13 of them shown as highlighted regions on the source pages. Section 5 lists each one; Section 9 shows them on the documents.

This summary is deliberately short. The reasons behind the tier are in Section 3, the complete checklist is in Section 4.

3. Explainable Findings

The case has not been scored, so there are no triggered risk reasons yet.

4. All Checks

The completeness record: every check that ran on every document, including those that passed. Section 3 is the narrative; this is the checklist.

Document 1 — caseimage2.pdf (Quotation · 0 passed, 1 flagged)

Check	Result	Details
Font consistency Text set in a different font family from the text around it (text layer, or OCR font recognition on scans).	Flag	13 finding(s). Page 1 (scanned): 'Center' looks like a different font (monospace) from the text around it (grotesque sans), per OCR font recognition — it may have been typed in or pasted before the page was printed or scanned. Only 3 word(s) on this page look...

5. Exceptions

Everything that did **not** pass, drawn from Section 4 and written as concrete items (13 in total). A region ID (R1, R2, ...) points to the highlight that shows the exception on the source page in Section 9 — click it to jump there.

No.	Exception	Where	Highlight
1	Font consistency: text set in a different font family from the text around it (OCR font recognition on a scan) Page 1 (scanned): 'Center' looks like a different font (monospace) from the text around it (grotesque sans), per OCR font recognition — it may have been typed in or pasted before the page was printed or scanned. 6. Limitations and Assumptions

Please read this section before relying on anything in this report.

Limitations of This Analysis

What this report is

This is **system-assisted analysis to support human review**. It is not a certified forensic or legal determination that any document is genuine, forged or fraudulent, and it must not be presented as one.

Three kinds of finding

Deterministic pixel and structure checks — error level analysis, copy-move detection and PDF metadata forensics — are computed by fixed algorithms over the file’s pixels and structure. Localized findings are drawn with **solid** boxes (ELA in red, copy-move in orange). They are signals, not proof: ELA in particular can false-positive on legitimately recompressed scans and can miss print-and-rescan tampering.

Deterministic rule-based field checks — field validation and cross-document consistency — compare extracted values by fixed rules and are drawn with **solid purple** boxes. They are exact about the values they compare, but only as reliable as the OCR and extraction that produced those values.

Model-judgment checks — the visual inconsistency review, the AI-generation assessment and the signature/stamp comparison — are **probabilistic assessments** made by a vision-language model, not deterministic proof. They can vary from run to run, and their boxes are only approximate; they are the **dashed** boxes captioned “approximate” throughout this report. Signature and stamp detection shows presence and placement only and is not an identity match; the AI-generation assessment is experimental, and its accuracy on scanned business documents has not been validated.

What the system can and cannot see

The system evaluates the **submitted document file itself**. It cannot verify facts external to the document — for example whether a real-world transaction actually occurred, whether the named issuer really produced the document, or (without a pre-existing reference signature) who a signatory is. Printed Arabic and English text are read; handwritten Arabic is not reliably read.

Absence of a finding

The absence of a flagged finding does not guarantee that a document is genuine. It means only that no supported check detected an anomaly.

Check coverage on this case

Not every check applies to every document or case. This is what actually ran here:

Check	Status	Coverage on this case
Metadata forensics	Did not run	Did not run on any of the 1 document(s).
Font consistency	Ran	Ran on 1 of 1 document(s); 1 flagged.
Error level analysis (ELA)	Did not run	Did not run on any of the 1 document(s).
Copy-move detection	Did not run	Did not run on any of the 1 document(s).
Visual inconsistency / AI-generation review	Did not run	Did not run on any of the 1 document(s).
Signature / stamp detection	Did not run	Did not run on any of the 1 document(s).
Duplicate detection	Did not run	Did not run on any of the 1 document(s).
Field validation	Did not run	Did not run on any of the 1 document(s).
Issuer verification	Did not run	Did not run on any of the 1 document(s).
Signature comparison (advisory)	Did not run	Did not run — no reference signature was set for this case.
Cross-document consistency	Not applicable	Not applicable — this case has a single document.

Risk score and rule versions

This case had not been scored when the report was generated, so no risk-rule versions apply.

Assumptions

What the analysis took to be true without independently verifying it. These are specific to what ran on this case.

- Field values were read by OCR followed by language-model extraction and are assumed to have been read correctly. Each field carries a confidence and an “uncertain” flag. This build records that flag but does not automatically route low-confidence documents to manual review, so it is listed here for the reviewer instead: no field was marked uncertain on this case.
- The SHA-256 chain of custody shows the stored file is unchanged since upload. It does not show that the uploaded file is the issuer’s original — a document altered before upload is judged on its content, like any other.
- Risk-rule weights, severities and tier thresholds are administrator-configured and assumed to be appropriately calibrated; the score is advisory and is not a probability of fraud.

7. Audit Trail

Chronological case-level events, read from the append-only audit log (times in UTC). This report does not write to or duplicate the log.

Time	Event	Actor	Detail
2026-10-07 06:44 UTC	Case created	testreviewer L! (Reviewer L1)	
2026-10-07 06:44 UTC	Document uploaded	testreviewer L! (Reviewer L1)	caseimage2.pdf; SHA-256 713a033844efdb18...
2026-10-07 06:45 UTC	Font consistency check completed	System	caseimage2.pdf
2026-10-07 06:45 UTC	Text extraction, classification and field extraction completed	System	caseimage2.pdf

8. Appendix

The detailed technical record, for someone auditing the analysis itself rather than a first-pass reviewer.

8.1 Extracted fields

Normalized values as stored at extraction time. “Located” is the page the value was matched to (used for the purple highlights); a blank means no position was recorded. Arabic values are shown right-to-left, numbers left-to-right.

8.2 Document hashes (chain of custody)

SHA-256 of each original as recorded when it was uploaded to immutable storage, re-checked against the stored file when this report was generated.

Document	SHA-256	Verification
caseimage2.pdf 63,211 bytes	713a033844efdb18928dda96b86dae3d6532c1ed3c46747938bac096bd10529d	VERIFIED

8.3 Technical parameters used by each check

Page rendering (input to ELA, copy-move, duplicate, visual review)

Render resolution	200 DPI
Colour model	RGB, converted to BGR for OpenCV

Field locations (purple highlights)

Method	extracted values matched back onto OCR word positions (Azure Document Intelligence Layout)
Repeated values	resolved by nearby keywords (“total”, “subtotal”, “VAT”, “date”...)
Accuracy	approximate; a field that cannot be matched is reported without a highlight

9. PDF Highlighted Regions

Every flagged page, rendered from the original with its findings drawn in. These are copies made for this report; the original files are untouched. Only pages with at least one highlight appear. Each highlight has a region ID that Section 5 refers back to.

Colour key

■	ELA (solid red)
■	Copy-move (solid orange)
■	Font mismatch in the text layer (solid fuchsia)
■	Field exception (solid purple)
■	Model judgment (dashed blue, approximate)
■	Page-level finding (not localized)

R1. Font consistency

Page 1 (scanned): 'Center' looks like a different font (monospace) from the text around it (grotesque sans), per OCR font recognition — it may have been typed in or pasted before the page was printed or scanned. Only 3 word(s) on this page look like this font, so it is shown for review but not scored: OCR font recognition alone is not reliable on a word or two.

R2. Font consistency

Page 1 (scanned): '1301' looks like a different font (monospace) from the text around it (grotesque sans), per OCR font recognition — it may have been typed in or pasted before the page was printed or scanned. Only 3 word(s) on this page look like this font, so it is shown for review but not scored: OCR font recognition alone is not reliable on a word or two.

R3. Font consistency

Page 1 (scanned): '2025' looks like a different font (monospace) from the text around it (grotesque sans), per OCR font recognition — it may have been typed in or pasted before the page was printed or scanned. Only 3 word(s) on this page look like this font, so it is shown for review but not scored: OCR font recognition alone is not reliable on a word or two.

R4. Font consistency

Page 1 (scanned): 'Ford' looks like a different font (serif) from the text around it (humanist sans), per OCR font recognition — it may have been typed in or pasted before the page was printed or scanned.

R5. Font consistency

Page 1 (scanned): 'Amount' looks like a different font (serif) from the text around it (grotesque sans), per OCR font recognition — it may have been typed in or pasted before the page was printed or scanned.

R6. Font consistency

Page 1 (scanned): 'Date:' looks like a different font (serif) from the text around it (grotesque sans), per OCR font recognition — it may have been typed in or pasted before the page was printed or scanned.

R7. Font consistency

Page 1 (scanned): 'Deposit' looks like a different font (serif) from the text around it (grotesque sans), per OCR font recognition — it may have been typed in or pasted before the page was printed or scanned.

R8. Font consistency

Page 1 (scanned): 'on' looks like a different font (serif) from the text around it (grotesque sans), per OCR font recognition — it may have been typed in or pasted before the page was printed or scanned.

R9. Font consistency

Page 1 (scanned): 'Bank' looks like a different font (serif) from the text around it (grotesque sans), per OCR font recognition — it may have been typed in or pasted before the page was printed or scanned.

R10. Font consistency

Page 1 (scanned): 'or' looks like a different font (serif) from the text around it (grotesque sans), per OCR font recognition — it may have been typed in or pasted before the page was printed or scanned.

R11. Font consistency

Page 1 (scanned): 'deposit,' looks like a different font (serif) from the text around it (grotesque sans), per OCR font recognition — it may have been typed in or pasted before the page was printed or scanned.

R12. Font consistency

Page 1 (scanned): 'Sales' looks like a different font (serif) from the text around it (grotesque sans), per OCR font recognition — it may have been typed in or pasted before the page was printed or scanned.

R13. Font consistency
